Wild Georgia Safari Park Environmental Awareness Collage Lesson Plan

Creating some art is a fantastic way to engage younger students in learning about nature and conservation. Here's a detailed list of materials you'll need for the activity:

1. Base Materials

- **Large Construction Paper**: Choose various colors to serve as the base for the collage.
- **Glue Sticks**: Easier for young students to handle than liquid glue and less messy.
- **Scissors**: Child-safe scissors for students to cut out images and shapes.

2. Visual Elements

- **Magazines and Newspapers**: Collect images of animals, plants, and nature scenes that students can cut out and use in their collages.
- **Printed Pictures**: Provide a selection of images from safe online sources (like wildlife or environmental sites) for students who may struggle to find images in magazines.
- **Nature Items**: Consider including leaves, twigs, or small flowers that students can glue onto their collages to add texture and real-life elements.

3. Artistic Supplies

- **Markers and Crayons**: For students to draw additional elements, write facts, or add colorful accents to their collages.
- **Colored Pencils**: These can provide more detailed artwork if students wish to add special touches.

- **Glitter or Sequins**: For those who want to add a little sparkle (verify that these materials are appropriate for the students' age to avoid mess).

4. Templates and Guides

- **Collage Templates**: Provide outlines or prompts to help students plan what they want to include in their collage (for instance, sections for animals, plants, and environmental phrases).
- **Fact Cards**: Simple cards with quick facts about local wildlife, conservation efforts, or famous environmentalists that students can reference while creating.

5. Presentation Materials

- **Display Boards**: If possible, have a space to display completed collages so students can share their work with classmates or families.
- **Labels**: Simple labels for students to write their names, the title of their collage, or the facts they found most interesting.

Additional Considerations

- **Safety**: Ensure that all materials used are safe for younger students.
- **Cleanup Supplies**: Have paper towels or wet wipes available for cleaning hands and surfaces after the activity.
